KEY FACTS

- Corrosion Resistant Gunmetal
- Easy Functionality
- Twist Jet / Spray / Off Operation
- Weather, Ozone & UV Resistant
- Low Maintenance
- Available with all International Inlet Adaptors

Type A DO9 Nozzle

Doc Ref: DDS132

GENERAL DESCRIPTION

The Delta DO9 Jet/Spray nozzle is a popular, low-cost, marine option appealing to a wide range of applications where there are corrosive, saline-rich environments. The rugged Gunmetal construction provides many years of trouble free service thanks to its highly corrosion resistant properties.

Available in three models to suit all sizes of mainline hoselines the DO9 provides simple On/Off function and selection between Jet & Spray modes by simply twisting the front barrel of the nozzle making it ideal for general purpose firefighting, washdown and dust suppression. A Jet Only option is also available.

The DO9 Type A long-pattern nozzle is supplied with either 2½" Instantaneous or 2" BSP male inlets for compatibility to any International inlet fitting. The smaller Type B model is only available with 1½" Instantaneous inlet & Jet / Spray version only (see below). It can also be supplied as a Jet / Spray version or Jet only.

With flows up to 615 LPM (160 GPM) (Jet Only Model) the DO9 is incredibly versatile and excellent value for money.
